AI calculator v15 KNOCKOFF shell: window mask cut template (1:1)

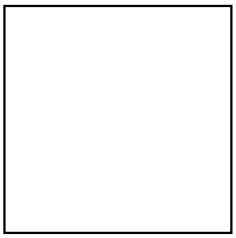

PRINT AT 100 % (“Actual size”, no “fit to page”). Check the 50 mm bar with a ruler before cutting.
Drawn as seen from the FRONT of the calculator, through the lens. Black = keep. White = cut out.

Outer edge (= clear lens)	65.35 x 29.00 mm, corner R 3.35
Opening (LCD active area + 0.5 each side)	43.72 x 23.70 mm, corner R 0.3
Opening position	0.00 mm right of the lens centre, -0.11 up (front view)
Bands: left / right / top / bottom	10.82 / 10.82 / 2.76 / 2.54 mm
Blue dashed (option)	60.35 x 24.00: fits through the window from inside, lens stays in
Material	matte black vinyl or sticker paper, 0.08-0.15 mm

50 mm: measure this bar. If it is not exactly 50 mm, reprint at 100 %.

30 x 30 mm check square

Steps: tape the print onto the vinyl's backing. Cut the opening first (straight edge + new craft-knife blade), then the outer edge. Clean the lens with IPA. The sticky side goes on the INSIDE face of the lens.
The opening is centred left-right (bands 10.8 / 10.8 mm): it hides the LCD ribbon, so the screen looks centred.
